

## Freedom with Fabco

### Freewheel Locking Hubs Now Available For Fabco Axles

In response to severe service customer needs for maximum off-highway vehicle capability combined with optimized on-highway performance, Fabco has made available Freewheel Locking Hubs for Fabco axles. A well accepted current technology in Class 1 thru 5 vehicles, Fabco is the only supplier with a system for up to 16,000-lb. front axle rating for Class 6 through 8 4x4 and 6x6 vehicles. Freewheel hubs can give the following on-highway performance benefits:

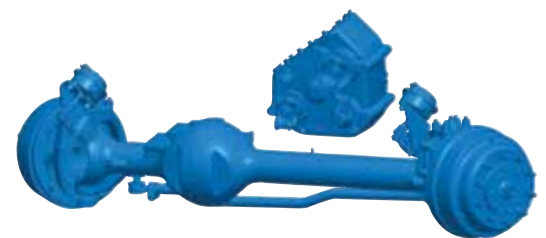

- Improved fuel economy
- Reduced drive train maintenance
- Improved tire wear and on-highway handling

Freewheel hubs are available for Fabco 8,000 through 16,000-lb. FSD Series Steerable Drive Axles—for either new axle purchases or field retrofit kits. Kits are also available for the previous generation SDA Series axles in 12,000 through 16,000-lb. ratings. The retrofit process is quick and no special tools are needed. Hubs do not limit any off-highway all wheel drive performance—off-highway unlimited performance that can't be matched by complicated, speed-limited and expensive hydraulic drive assist schemes.

Fabco Automotive has the greatest breadth of on/off-highway all wheel drive components in the commercial vehicle industry. Fabco Transfer Case and Steerable Drive Axles system designs are based on decades of severe service experience in such demanding applications as military, oil field, mining, logging, agriculture, construction, fire and utility. Please contact Fabco for more information.
